# 1. Introduction

Aport-212PG is a programmable serial to Ethernet gateway which includes Cortex-M3 CPU, 64KB SRAM and 512KB flash. Aport-212PG is designed for users who are looking for a tiny but mighty computing platform which has FreeRTOS and lwIP pre-installed. The tool chain, Sourcery CodeBench Lite can be downloaded from mentor website or you can also use Keil from ARM. A tiny web server is also available for web-based application such as ajax. A demo web page source code is available for user's reference.

The key features are as follow:

- NXP LPC1768 ARM Cortex-M3 100MHz
- 512KB on-chip flash, 64KB SRAM
- Two configurable RS-232/422/485 serial ports
- One 10/100Mbps Ethernet ports
- One serial console port
- Support lwIP and BSD socket library
- Support tiny Web server and AJAX application
- Windows configuration utility included
- Support Telnet and serial console command
- Toolchain: Sourcery CodeBench Lite (download from [www.mentor.com](http://www.mentor.com))

## 1.1 Specification

- **System:**
  - CPU: NXP LPC1768 Cortex-M3 100MHz
- **Serial port:**
  - Port1: RS-232/422/485
  - Port2: RS-232/485
  - Baud rate: 1200 to 921600 bps
  - Flow control: None/Hardware/Xon\_Xoff
  - Data bit: 5 to 8
  - Stop bit: 1 to 2
  - Protection: 15KV ESD
- **Ethernet:**
  - 10/100 Mbps, RJ45
  - Protection: 1500V Magnetic isolation
- **Serial console port:**
  - RS-232: 115200 baud rate, None flow control, 8 bits data, 1 stop bit
- **Power:** 9~40VDC power jack and terminal block
- **Dimension:** 108 x 78 x 25 mm (H x W x D)
- **Operating Temperature:** 0~70°C
- **Storage Temperature:** -20~85°C

## **1.2 Packing List**

- Aport-212PG programmable device server
- Software toolchain (download from Artila FTP)
- Manager Utility (download from Artila FTP)

## **1.3 Optional Accessory**

- CB-RJ2CON-100 (91-RJCON-100): Console Cable (RJ45 to DB9 Female, 100cm)
- DK-35A (36-DK35A-000): DIN RAIL Mounting Kit
- PWR-12V-1A (31-62100-000): 110~240VAC to 12VDC 1A Power Adaptor

## 2. Layout

### 3. Pin Assignment and Definition

#### 3.1 Power Connector

Connecting 9~40VDC power line with the Aport-212PG terminal block or the power jack. If the power is properly supplied, the Power LED will keep solid yellow color.

#### 3.2 Serial Port Connector

Serial Port uses a Male DB9 connector and it includes RS-232, RS-422 or RS485 signal and pin assignments are described as follow:

Pin No.	RS-232	RS-422	RS-485
1	DCD*	TXD-	-
2	RXD	TXD+	-
3	TXD	RXD+	DATA+
4	DTR*	RXD-	DATA-
5	GND	GND	GND
6	DSR*	-	-
7	RTS	-	-
8	CTS	-	-
9	-	-	-

#### 3.3 LED Status

The LED provides the Aport-212PG operation information. The LED status is described as follow:

- **Power LED:** Power LED keeps ON if power (+9VDC to +40VDC) is correctly input to Aport-212PG.
- **Ready LED:** Ready LED keeps ON when Aport-212PG firmware is ready for operation.
- **Link/Act LED:** Link and Activity LED will turn ON when the Ethernet cable is connected. When there is network data traffic, this LED will flash.
- **RX/TX LED:** The RX/TX LED is a dual color LED that indicates the serial data traffic. The Yellow LED stands for receiving data and Green LED means transmitting data.

#### 3.4 Factory Default Settings

**IP Address:** 192.168.2.127

**Netmask:** 255.255.255.0

**Serial Port:** RS-232

Baud rate: 115200

Data: No parity, 8 bits, 1 stop bit

Flow control: None

**Serial Console port:** RS-232

Baud rate: 115200

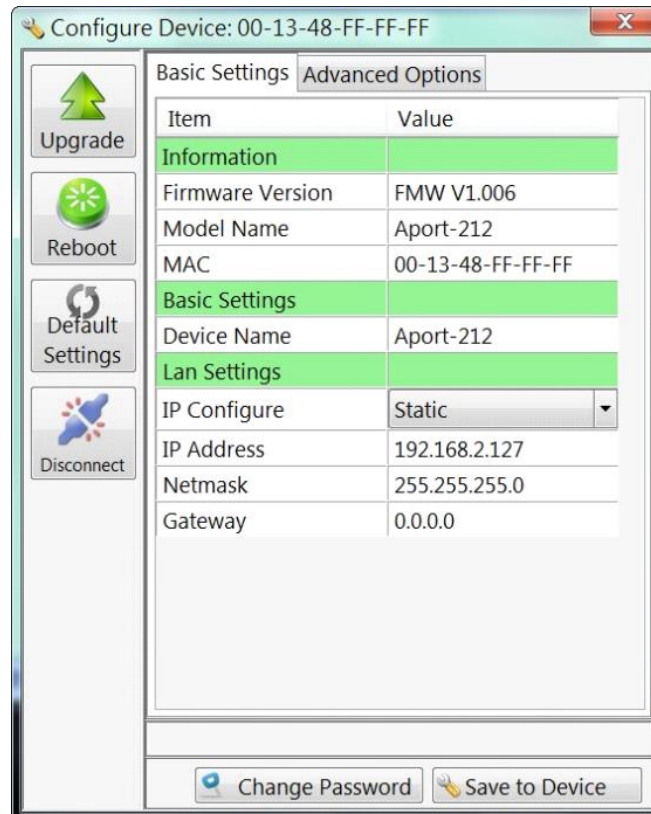

Data: No parity, 8 bits, 1 stop bit

Flow control: None

**Web console:** http://192.168.2.127:5003

**Telnet console:** telnet 192.168.2.127 5001

## 4. Artila Utility Software

### 4.1 Install Manager Utility Software

You can find many useful software utilities from Artila FTP. You need to install Manager Utility first in order to configure the Aport-212PG. To install the Manager Utility, please find the **ManagerUtilitysetup.exe** as shown following:

### 4.2 Broadcast Search

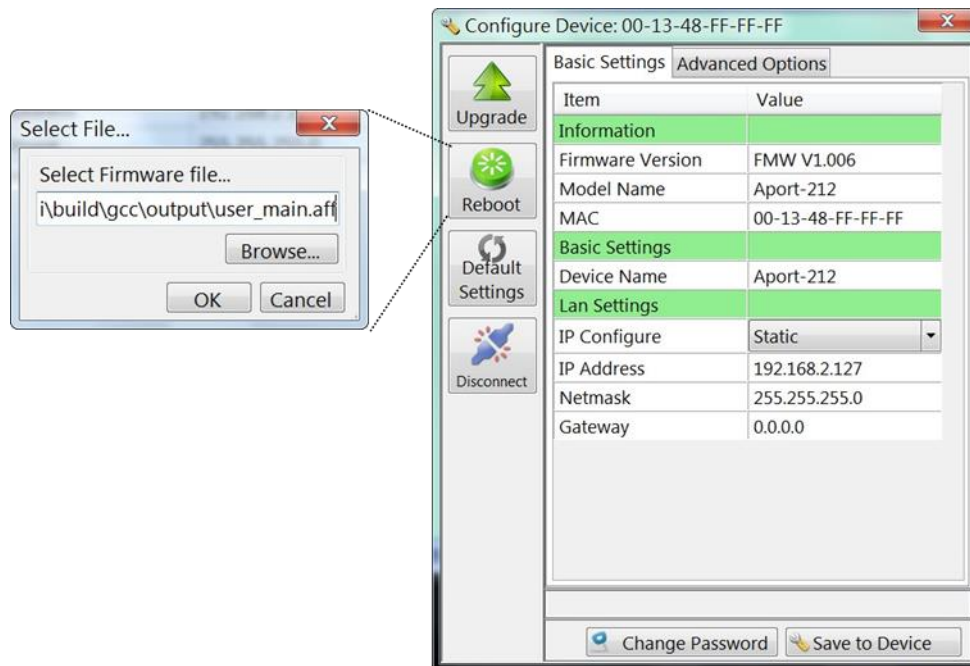

Once start Manager utility, you can click telescope icon to search the Aport-212PG in the network.

Click the device to configure its settings.

Click the upgrade to upload the new firmware ***user\_main.aff***.

### 4.3 Install Software Toolchain

The toolchain, Sourcery CodeBench Lite ARM EABI Release is available at:

<http://www.mentor.com/embedded-software/sourcery-tools/sourcery-codebench/editions/lite-edition/>

Configure the environment to add the path of the toolchain. After installing toolchain, a new path will be added to Windows Environment i.e.:

***Sourcery\_CodeBench\_Lite\_for\_ARM\_EABI\bin***

Restart the computer to make the new environment effective. After installation, you can test toolchain as follow:

```

命令提示字元
Microsoft Windows [版本 6.1.7600]

```

### 4.4 Install Eclipse IDE

If you are interesting in using IDE to develop your program, the eclipse IDE is available at:

<http://www.eclipse.org/downloads/>

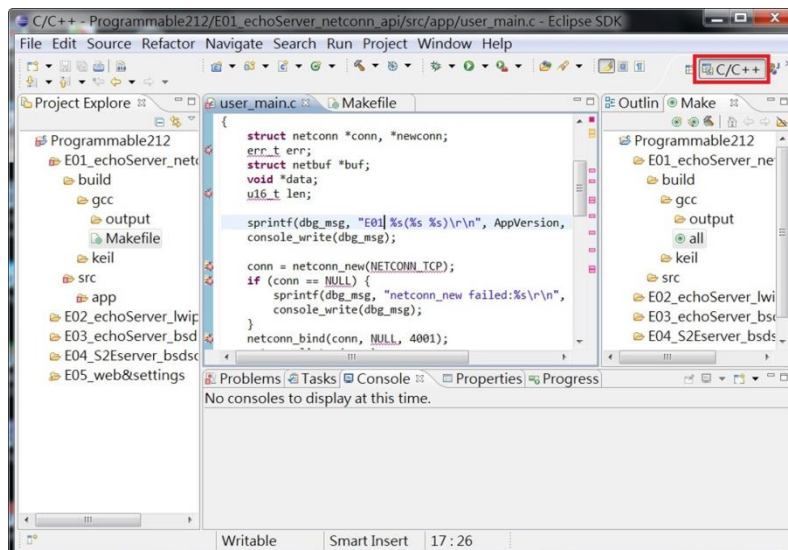

And choose C/C++ compiler option.

## 4.5 Start Your First Project

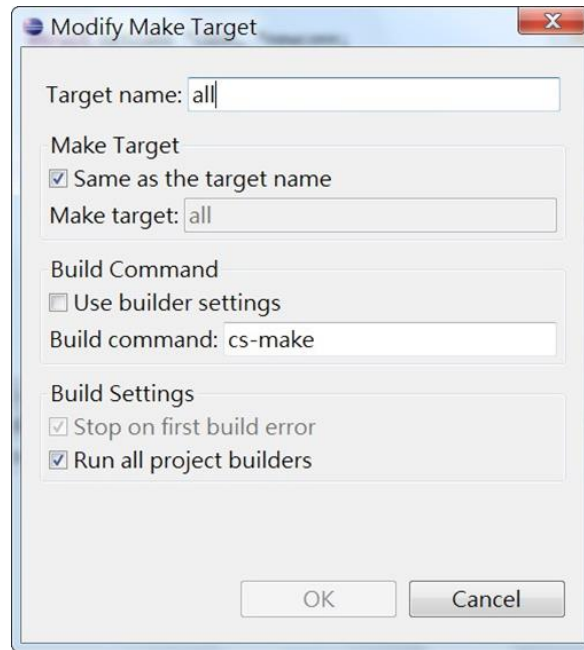

Run eclipse and select a workspace: **BSDrIs\Examples**. You can find the path of the example program on Artila FTP with path: **BSDrIs\Examples**.

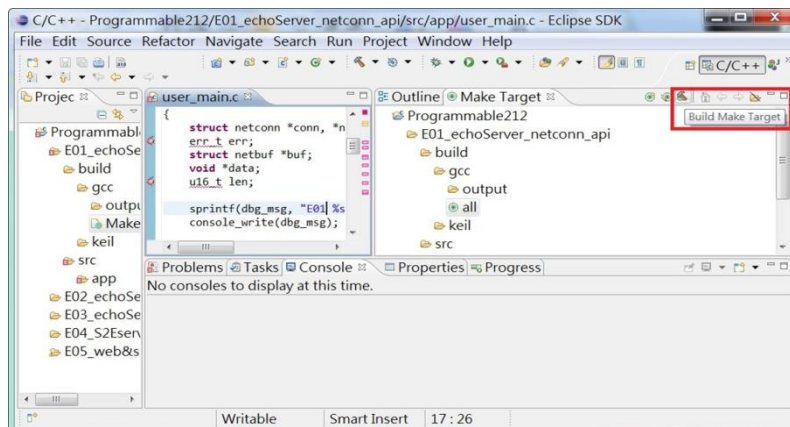

Choose C/C++ in the Workbench.

Modify the make file to compile the program as follow:

Use make file to build target.

Once project is built, you will find the target execution file ***user\_main.aff*** is generated and available at:  
***E01\_echoServer\_netconn\_api/build/gcc/output***
