1. Introduction

PAC-4010 is an ARM9-based Linux ready industrial controller.

1.1 Features

- ARM926EJ-S ARM Thumb Processor 400MHz w/MMU
- 32-KByte Data Cache and 32-KByte Instruction Cache
- 64MB SDRAM, 256MB NAND Flash on board
- Two 10/100Mbps Ethernet
- Two USB 2.0 full speed (12Mbps) Host Ports, one USB device port
- Multimedia Card Interface for microSD memory card
- Four serial ports: RS-232 x 2 and RS-232 x 2 or Isolated RS-485 x 2
- Eight channels 2500Vrms isolated photo coupler digital input (Bipolar)
- Eight channels 2500Vrms isolated Darlington digital output
- 9 to 40VDC power input
- Pre-installed Standard Linux 2.6 OS
- GNU toolchain available on Artila FTP
- DIN RAIL mounting

1.2 Packing List

- PAC-4010 Programmable Automation Controller
- DIN Rail bracket

1.3 Optional Accessory

- CB-RJ45F9-150 (91-R45F9-150): Serial Cable (RJ45 to DB9 Female, 150cm)
- CB-PHDF9-050 (91-PHDF9-050): Console Cable (Wafer Box to DB9 Female, 50cm)
- PWR-12V-1A (31-62100-000): 110~240VAC to 12VDC 1A Power Adaptor
2. Layout

Top of PAC-4010

Back of PAC-4010

Bottom of PAC-4010
3. Pin Assignment and Definition

3.1 Reset Button
Press the “Reset” button to activate the hardware reset. You should only use this function if the software reboot does not function properly.

3.2 Power LED
The Power LED will show solid green if power is properly applied.

3.3 Ready LED
The Ready LED will show solid green if PAC-4010 complete system boot up. If Ready LED is off during system boot up, please check if power input is correct. Turn off the power and restart PAC-4010 again. If Ready LED is still off, please contact the manufacture for technical support.

3.4 Link / Act LED
When Ethernet port are connected to the network, Link LED will show solid green. If there is traffic is the Ethernet line, the yellow Act LED will flash.

3.5 Serial Port LED
When RXD line is high then Yellow light is ON and when TXD line is high, Green light is ON.

3.6 Ethernet Port

<table>

</tr>
</tbody>
</table>

3.7 Serial Port
- Port 1~2: Software selectable RS-232 or isolated RS-485. If RS-485 is chosen, please use terminal block connector for RS-485.
- Port 3~4: RS-232 port with hardware flow control.

Note
Only Port 2 support RS-232 full modem control DSR, DCD and DTR.
3.8 Serial Console Port

Serial console port is located inside the box at JP4 of M-502. You need a special console cable (91-PHDF9-050) to access it.

Use any terminal software such as hyper terminal and configure the setting as follow:

- Baud rate: 115200
- Data bits: 8
- Parity: N
- Stop bit: 1
- Terminal type: VT100

**Note**

We provide a utility software, setconsole to redirect the console port to any one of the serial port. Therefore user do not need to open the case to access the physical console port. Please refer to setconsole command in the Artila utility section.
3.9 Power Input Connector

PAC-4010 uses +9VDC to 40VDC power and input from three ports plug-in screw terminal connector. Auto-polarity and surge protection are included in power input circuitry of PAC-4010 to provide power protection. Shielding ground provides better EMI protection. Please wire the shielding ground to an appropriate grounded metal surface.

3.10 Digital Output Connector

The digital output are equipped with 8 darlington pair transistors (Allegro UDN2981A) to switch the external relay or solenoid. The internal transient-suppression diodes permit the drive to be used with inductive load. The source voltage of the drive is from 5Vdc to 50Vdc and the maximum driving current is 500mA. 2500Vrms isolation is provided in all 8 DO ports.

3.11 Digital Input Connector

The 8 channel isolated input are equipped with 2500Vrms photo coupler. Four of the channels form a group and share the same common ground. The specification of the isolated input channels are:

- Logical High: 5~24Vdc
- Logical Low: 0~1.5Vdc
- Input resistance: 1.2KOhms @0.5W
- Response time: 20µs
- Isolation: 2500Vrms
<table>

</tr>
</tbody>
</table>

DIx: Isolated digital input channels.
COMx: common ground of four DIx.
DOx: Voltage output channels.
GND: Ground of DO (Darlington).
VS: Voltage source of DO.

### 3.12 Factory Default Settings

**LAN 1 IP Address:** 192.168.2.127

**LAN 2 IP Address:** 192.168.3.127

**Login:** root or guest (telnet guest only)

**Password:** root or guest (telnet guest only)

**Serial Console Port:**

- **Baud rate:** 115200
- **Data format:** 8 Bits, No Parity, 1 Stop bit (N,8,1)
- **Flow Control:** None
- **Terminal type:** VT100
3.13 Power on and System Boot up

Once PAC-4010 is correctly power on, it will start boot Linux kernel and mount file system. You can use Ethernet and telnet and login PAC-4010. Once kernel loaded, it will find /sbin/init and execute it. The initialization configuration is at /etc/inittab. Once boot up, you can use telnet to login PAC-4010.

3.14 Initram and Run Levels

Initram contains information of system initialization. The system initialization script /etc/rcS.d runs first then the run level 5 /etc/rc5.d. PAC-4010 uses run level for system setup and the default run level is number 5. Please refer to introduction to linux (http://tille.garrels.be/training/tldp/) for information about run level. Following is the run levels setting:

- Run level 0: halt
- Run level 1 is single user (login and service are disabled)
- Run level 2~5 are multiple users
- Run level 6 is reboot

Please refer to loader menu section for selection of run level.

3.15 Default Started Service

1. amgrd (Artila broadcast search daemon)
2. ssh (secured shell) with sftp
3. syslog/klogd (system and kernel log)
4. telnet server (disable root with /etc/securetty)
5. ftp server (vsftpd)
6. web server (apache2)
7. Ready LED (debug LED for internal use)
3.16 Network Settings

3.17 Insert Kernel Module

To insert kernel module while system boot up, please use vi to edit `/etc/modules` to add module to load e.g.

```
rt73usb
```

To load the USB WLAN adaptor.

Use vi editing tool to edit the `/etc/network/interfaces` for network setting. The default setting is static IP 192.168.2.127. PAC-4010 also supports Wireless LAN. Use

```
wireless_essid XXX
wireless_key YYY
```

To add SSID and WEP key if necessary. XXX is SSID and YYY is WEP Key.

PAC-4010 supports USB WLAN adaptor (Ralink RT2571). You can enable the driver module (rt73usb) by adding `rt73usb` in

```
/etc/modules`
3.18 File System

The 256MB NAND Flash memory of PAC-4010 contains Boot loader (uBoot), Linux Kernel, Root File System and user disk (/home). The file system and disk space are shown as follow.

3.19 Devices List

The supported devices are shown at /dev directory. Following list are most popular ones:

1. ttyS0: serial console port
2. ttyS1 to ttyS4: serial port 1 to port 4
3. sda to sdb: USB flash disk
4. ttyUSB0 to ttyUSB1: USB RS-232 adaptor (fdti_sio.ko)
5. rtc: Real Time Clock
6. gpio: Digital I/O
7. ttyACM0 and ttyACM1: USB Modem (CDC compliant)
8. mmc: SD driver

3.20 Utility Software

PAC-4010 includes busybox utility collection and Artila utility software and there are placed at:

/sbin
/bin
/usr/bin
/use/sbin

Please refer to Appendix for the utility collection list.
3.21 Mounting External Storage Memory

To find out the device name of the external memory device which plug into PAC-4010, you can use the command:

```
dmesg | grep sd
```

```
dmesg | grep mmc
```

To find out the device type (sda, sdb or mmc).

And use

```
mount /dev/sda1
```

```
mount /dev/mmc
```

to mount the USB disk or SD card and folder is local at

```
media/sda1 or /mnt/sda1
```
3.22 Welcome Message
To modify the welcome message, user can use text edit to modify the /etc/motd.

3.23 Web Page Directory
The web pages are placed at /usr/www and the /etc/lighttpd.conf contains the lighttpd web server settings. The home page name should be index.html.

3.24 Adjust the System Time
To adjust the RTC time, you can follow the command:

```
date MMDDhhmmYYYY
```

where

- **MM**=Month (01~12)
- **DD**=Date (01~31)
- **hh**=Hour
- **mm**=minutes
- **YYYY**=Year

```
hwclock –w
```

To write the date information to RTC.

User can also use NTP client utility on Artila FTP to adjust the RTC time.

```
ntpclient [time server ip]
```

3.25 SSH Console
PAC-4010 supports SSH. If you use Linux computer, you can use SSH command to login PAC-4010. The configuration of SSH and key are located at /etc/ssh. The key generation program is available at /usr/bin.

3.26 Putty Console Software
For Windows user, you can download the putty software at http://www.chiark.greenend.org.uk/~sgtatham/putty/download.html to use SSH to login PAC-4010.
3.27 ipkg Package Software Management

ipkg is a light software package utility. It can be used to install, upgrade and remove the software package for PAC-4010. Currently user can use ipkg to install the software package from Artila FTP. You can find the configuration at ipkg.conf.

When PAC-4010 is connected to network and issue command:

   ipkg update
To update the package list and use

   ipkg install
To install software package and

   ipkg remove
To remove software

   ipkg list
To list available software

   ipkg list_installed
To list software installed

Please refer to Appendix for more about ipkg.

3.28 Install GNU Toolchain

Find a PC with Linux OS installed as followed:
Fedore 7, ubuntu 7.04, OpenSUSE 10.2, Mandriva 2008, Debian 5.0, Centos (RedHat) 5 and above.

Login as a root user then copy the arm-linux-4.3.2.tar.gz to root directory of PC. Under root directory, type following command to install the PAC-4010 Toolchain:

```
#tar -xvfj arm-linux-4.3.3.tar.bz2
```

The toolchain file name are:

   arm-linux-gnueabi-gcc
   arm-linux-gnueabi-g++
   arm-linux-gnueabi-strip

Version: gcc 4.3.3, glibc 2.9, binutils 2.18

The toolchain file name are:

   arm-none-linux-gnueabi-gcc
   arm-none-linux-gnueabi-g++
   arm-none-linux-gnueabi-strip
3.29 Getting Started with the Hello Program

There are many example programs on Artila FTP. To compile the sample you can use the Make file and type:

```make
make
```

To compile and link the library. Once done, use ftp command

```ftp
ftp 192.168.2.127
```

Then login with password. Use bin command to set transfer mode to binary

```ftp>
bin
```

To transfer the execution file to PAC-4010 user disk (/home/guest) and use

```chmod +x file.o
```

To change it to execution mode and

```./file.o
```

to run the program.

3.30 Auto Start Program on Boot

To start a program on boot, you can use `/etc/rc.local`.

For example to use `vi` to edit `rc.local`

```hello &
exit 0
```

Hello will be executed after system boot up. `rc.local` has the similar function as `/etc/rc` in PAC-4010.
4. Artila Utility Software

The introduction of Artila utility software as follow:

4.1 update
Update loader, environment file and kernel image. Type `update--help` to find the command usage.

Update can only operate under supervisor mode (password: root). Please use command `su` and login as root.

4.2 setuart
Configure serial port setting. An example show as followed to configure port 1 as RS-485 interface with baud rate 921600.

4.3 setconsole
PAC-4010 is designed to use M-502 SoM as its CPU module. The console port is located at JP4 of M-502 module. User can use `setconsole` command to redirect the serial console port to any one of the four serial port of PAC-4010. Therefore user can avoid opening the metal case to access the serial console.
4.4 version

Find out the version of OS.

4.5 gpiocntl

The gpio can be configured by *gpiocntl* and the usage is as shown followed.

GPIO0~GPIO7 are configured as isolated DI0 to DI7 and GPIO8~GPIO15 are configured as isolated DO0 to Isolated DO7.
5. Loader Menu

Loader menu helps user to select the run level of system boot up. User need to use serial console to enter loader menu. Please configure the serial port of terminal as follow:

- Baud Rate: 115200
- Data bits: 8
- Parity: N
- Stop bit: 1
- Flow Control: None
- Terminal type: VT100

Once power up PAC-4010, please repeatedly keying “@” and you will see the loader menu appear as follow:

```
Starting MS02........
**************************************************************************
 Artila Loader Version 2.0.9
 DRAM:64M NAND:128M
**************************************************************************
 G: Loader TFTP  L: Loader Serial
 K: Kernel TFTP   S: Kernel Serial
 F: Filesys TFTP  T: Filesys Serial
 E: Env. Upgrade  M: Ethernet Setting
 A: Dataflash Booting  U: Runlevel
 C: Switch Console  R: Reset
**************************************************************************
```

If you miss the timing, please power on again the PAC-4010 and do it again. Select U will prompt the run level selection message. Run level 0 is halt, run level 1 is single user (disable login and service). Run level 2~5 are multiple users and run level 6 is reboot. To view the run level configuration, please check:

```
/etc/inittab
```
6. Frequently Asked Question

6.1 Forgot Password
If you forgot the password for login, please use serial console and use run level 1 to boot system. Use passwd to change the password setting.

6.2 Forgot the IP Address
If you forgot the PAC-4010 IP address, you can use the Java Manager available on Artila FTP to search the IP address of PAC-4010.

Or use serial console port to find out the IP address by `ifconfig`.

6.3 System Fail to Boot
If you mess up the root file system and make the system fail to boot, PAC-4010 will automatically switch to boot from DataFlash file system and a console menu will show up at console port to help user perform system recovery. *System Recovery Section* will tell you how to recover the system.
7. System Recovery

If NAND Flash file system does fail, DataFlash file system will automatically boot up and a Console Menu at console port will appear as follow:

![Console Menu](image)

7.1 Update Image

This option can recover the loader, kernel and file system by using an USB disk. The USB disk contains the images files with the path as follow:

- **Loader**: `pac4000/pac4000.alf`
- **Kernel**: `pac4000/pac4000K`
- **File system**: `pac4000/pac4000R`

The files are available on Artila FTP. Please prepare an USB disk and copy the image files to it before choosing this option.

7.2 Make Filesystem

This option is used to create customized file system. Before using this function, you need to copy the folder of `mkimage504` on Artila FTP to an USB disk. This function will create a new file system image for users and they can use it to duplicate the customized file system to other PAC-4010.

7.3 Recovery Env.

The option will recover the environment files as default setting. Use this function only when the NAND file system crash.

7.4 Show Info

Show the version information of PAC-4010.

7.5 Reboot

Reboot the NAND flash file system.
7.6 Update Image Starts

![Update Image Starts]

7.7 Update Image Completes

![Update Image Completes]

7.8 Make Files System Starts

![Make Files System Starts]

**Note**

- Use Arrow keys up and down to selection the functions.
- Use Arrow keys left and right to go to higher or lower levels of menu screen.
- To force system go into DataFlash booting, repeatedly keying "!" (Shift +1) right after PAC-4010 power on.
8. Appendix

8.1 Utility Collection

- busybox v1.14.2: tiny utility collection
- sysvinit v2.86: standard Linux initialization
- util-linux-mount/umount v2.12r: support long file name
- ssh v4.6p1: support sftp server
- usbutils v0.7: USB id program
- lighttpd v 1.4.28: web server
- wget v1.9.1: used in ipkg software
- iptables v1.3.8: IP routing
- ipkg v0.99.163: software package management
- procps v3.2.7: support webmin process management
- vsftpd v2.0.5: ftp server
- bash v3.2: GNU shell
- wireless_tools v29: wireless LAN utility
- ppp v2.4.3: ppp dial up utility
- psmics v22.2: procps supplement
- artila utility v.1.1: handy utility added by Artila

You can find more utility on Artila FTP and use ipkg to install the utility.

8.2 ipkg Software Package Management

PAC-4010 uses `ipkg` to manage the software installation, upgrade and removal. Artila will continuously add the kernel module and utility on Artila FTP, user can install these software from Artila FTP. In addition user can also setup your FTP server to update the software you want.

**How to setup ipkg via internet**

enable DHCP

```
$ udhcpc eth0
```

make sure your network environment can access internet

```
$ ping www.artila.com
```

modify `/etc/ipkg.conf`

```
add the following two lines

src/gz arm http://www.artila.com/download/ipkgs/9G20/utility/
src/gz kernel http://www.artila.com/download/ipkgs/9G20/modules/
```

comment out other package source

```
save and quit
```
execute ipkg update
$ ipkg update

examples of package installation
$ ipkg install pythoncore
$ ipkg install pythontserial

How to setup ipkg via USB disk
You can also copy the Utility and module folder from Artila FTP to a USB disk, then use USB disk to install the software by changing the ipkg.conf

```
src/gz usb_arm ftp://root:root@127.0.0.1/media/sda1/Utility
src/gz usb_kernel ftp://root:root@127.0.0.1/media/sda1/modules
```

Make sure the USB disk is correctly mounted, now use command:

```
   ipkg update
```

To update the package list and use

```
   ipkg install webmin
```

To install webmin. Webmin is a web-based interface to system administration.

To start webmin, go to /etc/webmin and type

```
   start webmin
```

Then you can use browser to visit PAC-4010 port 10000.
http://192.168.2.127:10000
The webmin for PAC-4010 provides following modules:

- Webmin: webmin configuration
- System: system boot, process and log management
- Server: Apache and SSH server configuration
- Network: network configuration
- Hardware: RTC setting
- Others: File manager, upload and download

Remember to use command:

```bash
depmod -a /lib/modules/2.6.29.4/modules.dep
```

To update the dependency list if new kernel module were added.
